Wisdom achieves prosperity:

Wisdom Networks crowd create the next stage of productivity, growth and society

PROGRESS

INFORMATION AGE

(Centralised stagnation)

Exhaustion - no productivity,
no growth, zero sum game,
wealth transfers

WISDOM NETWORKS

(Distributed power and prosperity)

Abundance - rapid jump in productivity
and growth, exponential crowd contribution,
wealth creation

People are evolving toward digital "books" shared with everyone, everywhere, anytime across all communities ... and crowd creates the next an era of distributed prosperity!

Facebook bought "books" to social in 10 years
Facebook reduced social interaction to books of "things" that could shared with anyone, everywhere and restructured global social time and attention and achieved transparency and meritocracy in less than 10 years.

Wisdom Networks bring "books" to everything else in 2-5 years
Wisdom Networks will reduce organisations, industries and society to books that can be shared with anyone, everywhere, anytime and transform organisations, industry and the remainder of society within 2-5 years.
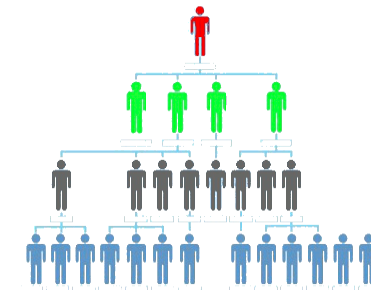

Only 30 networks required to achieve distributed prosperity?
As few as 30 wisdom networks can transform society and achieve distributed prosperity. Each can be launched within 90-180 days and achieve critical mass within 2-5 years.

Shell defines WHAT? two alternative scenarios are in our future ...
Wisdom Networks are HOW? we crowd create a better world and prosperity

STATUS QUO CENTRALISED INFORMATION AGE STAGNATION

DISTRIBUTED DECENTRALISED WISDOM NETWORKS PROSPERITY

Who will choose (and create) the future?
People, corporations or goverment

Mountains (Shell scenario)

"The first scenario, labelled "mountains", sees a strong role for government and the introduction of firm and far-reaching policy measures. "[1]

"This is the world with status quo power locked in and held tightly by the currently influential. Stability is the highest prize: those at the top align their interests to unlock resources steadily and cautiously, not solely dictated by immediate market forces. The resulting rigidity within the system dampens economic dynamism and stifles social mobility." [1]

We could be in a "trapped transition" for another 16 years

Oceans (Shell Scenario)

"The second scenario, which we call "oceans", describes a more prosperous and volatile world. Energy demand surges, due to strong economic growth. Power is more widely distributed and governments take longer to agree major decisions. "[1]

"Influence stretches far and wide in the world of Oceans. Power is devolved, competing interests are accommodated and compromise is king. Economic productivity surges on a huge wave of reforms, yet social cohesion is sometimes eroded and politics destabilised. This causes much secondary policy development to stagnate, giving immediate market forces greater prominence."[1]

We could implement this future in 2 - 5 years

Source: [1] Shell News Lens Scenarios (is.gd/newlens)

Organisations, industries and countries choose their pathway to the future ... "trapped transition" (by default) or "Punctuated reform"
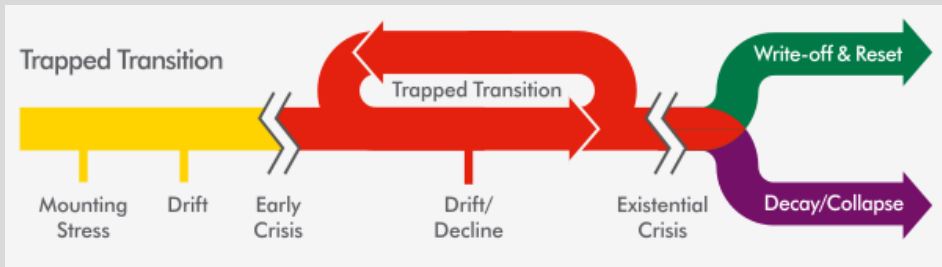

Trapped transition
(drift, decline, collapse)

"Others, however, struggle until the crisis escalates to a level that enforces either dramatic and painful restructuring or collapse."[1]

"Financial, social, political or technological capacity prove inadequate to withstand stresses. Behavioural responses delay change, causing conditions to worsen until ultimately a reset is forced or a collapse occurs."[1]
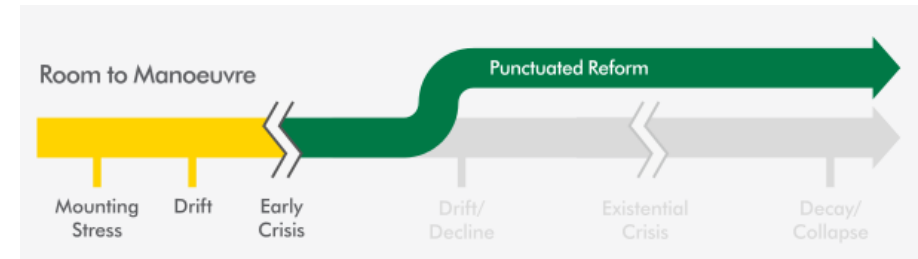

## Punctuated reform
(productivity, growth)

"When stresses rise, and a crisis emerges, some actors exhibit relevant forms of resilience that enable them to adapt and reform. "[1]

"Financial, social, political or technological capital encourage early action and result in effective change/reform."[1]

Information Age ends with centralised stagnation

Wisdom Networks crowd create distributed prosperity

The Path of decline

Apathy

↓

Unemployment

↓

Expenditure exceeds income

↓

Debt

Information

↑

Data

Productivity drives standard of living
Productivity is declining, or negative, worldwide

Euro Area has negative productivity

Law of diminishing returns means returns approaching zero and GDP is capped

The best GDP growth the USA can achieve is 1.8% - half the growth of the last 50 years.

Like all "general purpose technology" in history, the first generation has used the internet to speed up the status quo ... no technology revolution in these productivity figures!

Further investment in the status quo will not improve productivity, growth or standard of living

Chart 2: Trend growth of total factor productivity

Greater efficiency in emerging economies has boosted global trend in Total Factor Productivity, but impact is weakening
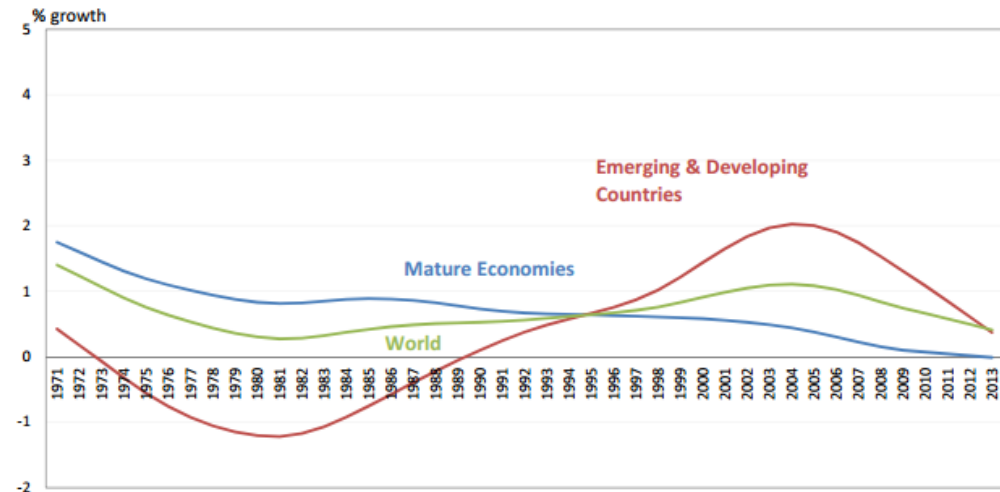

Source: The Conference Board *Total Economy Database*™, January 2013
Note: The solid trend line is based on HP filters, including projections of productivity for 2012 and 2013.

Wisdom Networks could double, triple or quadruple productivity of every employee by restructuring human time and attention...
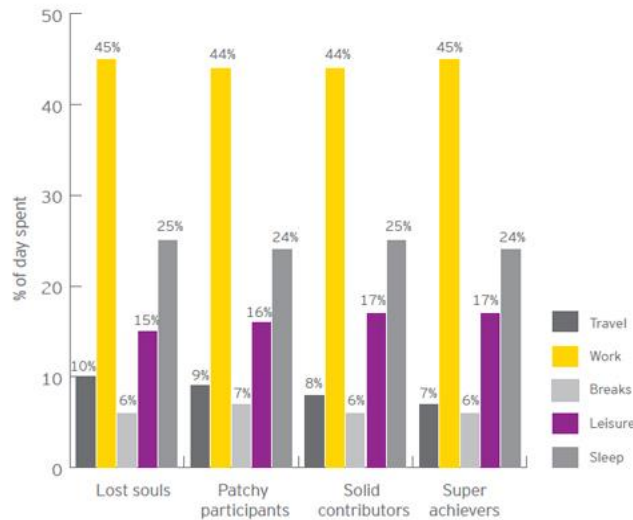

sources include reclaiming travel time, reclaiming identified wasted time, restructuring unproductive work time and gamification

**Reclaiming half of travel time increases productivity by 10%** → **Reclaiming acknowledged wasted time increases productivity a further 20%** → **Restructuring 30%, 60%, 90% of <u>unproductive work time</u> lifts productivity by 100%, 200% and 300% respectively**
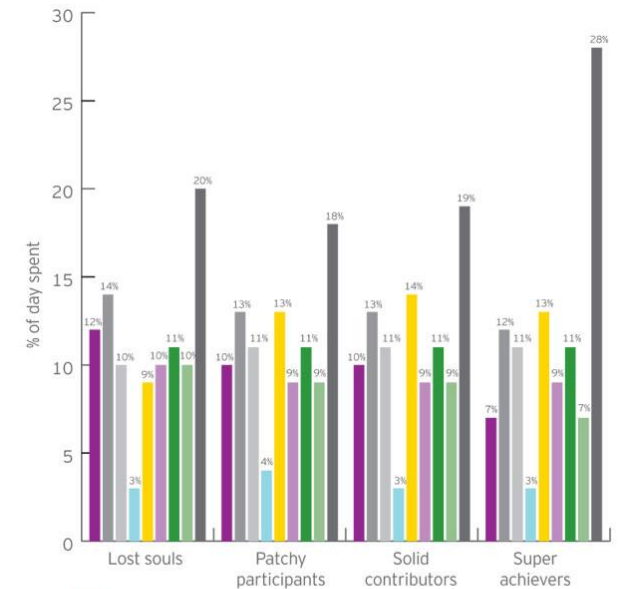

Of their day, people spend 44% at work, 17% leisure and 8% on travel

Legend: Travel, Work, Breaks, Leisure, Sleep
Categories: Lost souls, Patchy participants, Solid contributors, Super achievers

People acknowledge they waste at least 18% of their worktime... as below

Pie chart:
- Meaningless production — 12%
- Process waiting time — 16%
- Technology waiting — 13%
- Social Media — 4%
- Email — 15%
- Production Waste — 11%
- Wasted motion/defects — 13%
- Unnecessary meetings — 9%
- Other, please specify — 7%

up to 72% of work time is unproductive

Legend: Meaningless production, Process waiting time, Technology waiting, Social media, Email, Production waste, Wasted motion/defects, Unnecessary meetings, Other, please specify

72% of work time is unproductive

Only 28% of work time is productive

@MarcusCake, WisdomNetworks.im CC BY-NC-SA 3.0

Source: Ernst and Young Australian Productivity Pulse: Wave 1 (October 2011) and Wave 2 (May 2012) - is.gd/autime

Only restructuring human time and attention with wisdom networks will provide a radical jump in productivity, growth and wealth to sustain society

Wisdom Books **Wisdom Networks** **Network Society**

WISDOM

Only restructuring human time and attention can deliver a radical jump in productivity and growth to improve outcomes
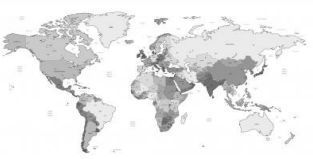

WE NEED TO MOVE FROM THE INFORMATION AGE - IT'S EXHAUSTED

Information technology

Hierarchy

Countries

COLLAPSE

Further investment in the status quo will not improve productivity, growth
or our capability to resolve future problems

CENTRALISED STAGNATION

Declining or negative productivity and stagnant growth has reduced society to wealth transfers and a zero sum game

# Wisdom Networks make use of Internet of Everything (IoE)
a cloud of things, books, communities, process and outcomes distributed among people

The second generation uses the flexibility of the internet to restructure human time and attention to deliver a rapid jump in productivity and growth

Society currently distributes multiple copies of "things" amongst people ... wisdom networks bring the people to one "thing"

How we connect?

Every community is reduced to 6 types of "Things" which are tagged, linked , and shared to create "Books" which consumers push through a process to achieve outcomes

Individual
Family
Devices
Organisation
Health
Economic development
Democracy
Knowledge (Books timeline & Maps)
Innovation
Equity Market
Education

Data → Information → Community → Collaboration → Knowledge → Wisdom

Wisdom Networks drive a 6 stage Process

to assemble information, reveal knowledge, and organise action toward outcomes

Wisdom Books are how people share knowledge and focus wisdom in a Network Society

Wisdom Books are a comprehensive and efficient means of person to person communication

M&ABook (a list of M&A opportunities for assessment, due diligence, completion or monitoring)

InvestmentBook (a list of investments across multiple asset classes ... includes many OrganisationBook and ProductBook.

InsurerBook
Product information, book meetings, complete forms online

RentalPropertyBook
(read profile, review video, check availability make bookings)

PropertySaleBook
(read profile, review video, check availability make bookings)

MechanicBook
Check reviews, book car in for service, specify tasks

VentureBook (a list of ventures for assessment, due diligence, completion or monitoring)

ProductBook (details of a product, its attributes and "things" (organisation, compliance, events) linked to it

ClaimBook
(assemble insurance claim online - shared with assessor)

LawyerBook
Tasks assigned to lawyer, availability, check reviews

AcountantBook
Tasks assigned to accountant, availability, check reviews

RestaurantBook
(read reviews, check availability make bookings)

ShareholderBook
(review annual reports. complete proxy form, RSVP to meeting invitation, online poll?)

FederalBook
All Federal Govt "Things"

CONSUMER

FINANCIAL MARKET

InsuredBook
My insurance policies

CarBook
Mileage, service reports, real-time data - shared with mechanic

GOVERNMENT

StateBook
All State Govt "Things"

ProductBook
My insurance, equity and debt

LocalBook
All Local Govt "Things"

GOVERNANCE

DirectorBook
Direct managers

Real-time knowledge, action and wisdom about every "thing" and every book

GovernmentBook
all my government interactions, drivers license, tax

BoardBook
participates in virtual board meetings, review minutes, information, discussion, questions, online poll

BureaucratBook
(review bureaucrats projects and progress on construction of local community centre)

ManagerBook
Manage Executives

CitizenBook
(all my government interactions, drivers license)

DEMOCRACY

OrganisationBook
My workplace

WORK

ExecutiveBook
Execute job

PoliticianBook
(review politicians policies, comment on his health policy, complain about progress on community centre)

StudentBook
profile, assignments

PatientBook
My health record

EDUCATION

DoctorBook
(What new "things" have happened to my patients)

DoctorBook
Doctor writes me a prescription

TeacherBook
profile, courses

HEALTH (PERSONAL)

CourseBook
meetings (tutorials), lectures (event management), assignments, exams

PharmacistBook
my new prescription appears in Pharmacist dashboard in real-time. Pharmacist arranges delivery

SchoolBook
(profile, current courses

HEALTH (DELIVERY)
John Smith PatientBook
(review his xray shared by radiologist, start discussion, set task for John to have a more detailed XRay, "Referral" for 2nd XRay added to PatientBook

HospitalBook
(reviews information about hospital, book a procedure

UniversityBook
(profile, current courses

"things" are created, tagged and linked in a minute and appear in "books" instantly ... community has real-time knowledge, action and wisdom!

health example below ... others include education, management, equity market governance ... everywhere!
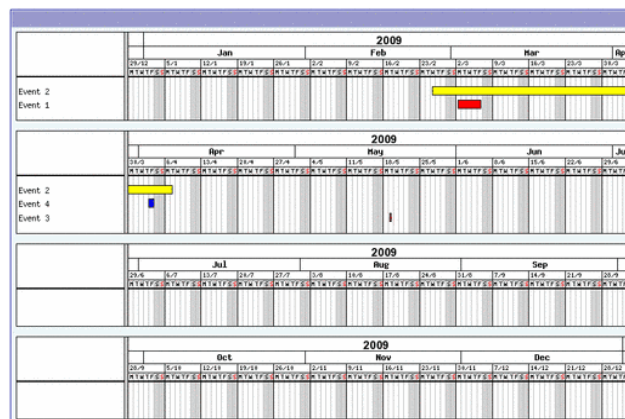

KEY

| BOOK | ←→ **KNOWLEDGE / WISDOM** → | THING |

Carer
"Things" linked to a carer

Radiologist

X-Ray

Referral

Patients can check availability and book meetings instantly

Carers can see and (if necessary) control PatientBook

Patient plan

Patient
All "things" linked to a patient

Doctor sees all content of Patient(Book)

Doctor
All "things" linked to a Doctor

Clinical Trial

Course

Association

Journal

Research

Medicine

Prescription

Device (data)

Claim

Prescription delivered to pharmacist instantly

Insurer

Pharmacist

Every "book" is focused on outcomes ... you can assemble how "things" come together in the future to achieve them

Each Book defines outcomes

"Things" appear in a timeline

You can assemble and see how "things" (information, community, collaboration, knowledge, wisdom) come together

- Past: Audit trail (list of past "things") for accountability
- Present: organise everything today and let it unfold tomorrow
- Future: Project plan (a list of future "things") to focus or schedule future community effort

Meritocracy

Transparency encourages accountability

Collective knowledge achieves meritocracy

The people decide how wisdom is focussed on things and books in real-time

Wisdom Networks embody how we like to play together and achieve better outcomes from our work and contribution

People, books and things are distributed across information and wisdom networks that becomes a collective intelligence.

Wisdom networks link little data at their source into Wisdom Books with the creators permission in real-time.

Information age structures that aggregate big data off information into an opaque silo become redundant. People that previously organised information now contribute wisdom to things and books.

Community recognises the quantity and quality of contribution with points and status. Community contribution becomes a real time game.

Community already spends most of their free time social networking and playing. Wisdom networks are how people want to work and contribute.

No information Age structure could ever compare with the real-time, costless and effectiveness of a wisdom network.

People earn points and status by contributing to Network Society and each other

A simple, but profound change .... knowledge is created and action organised by everyone in one place (a Wisdom Book)

Knowledge is created for an individual
Individuals push and pull "things" over months to develop "personal" knowledge - action based upon individuals

Knowledge is created for the community
Community links every "thing" in one location for everyone to crowd create collective knowledge and action everywhere in real-time
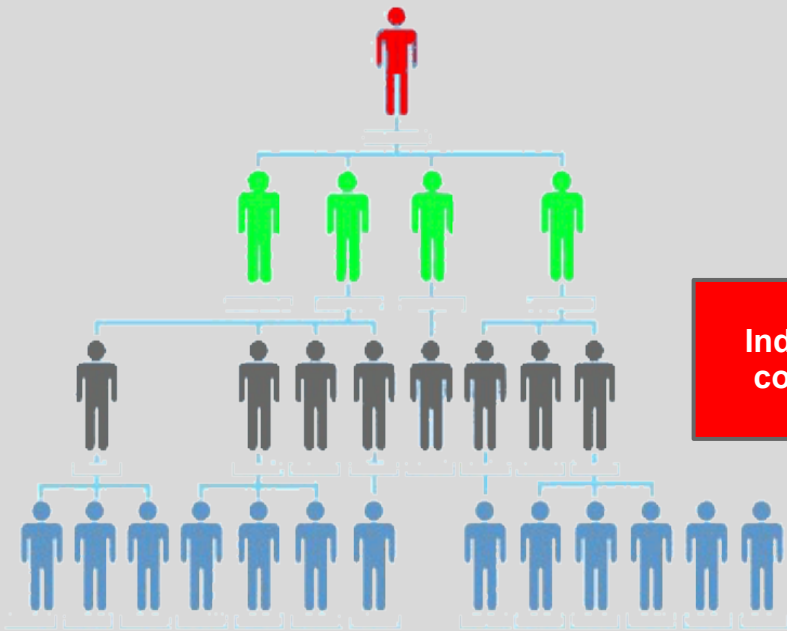

Individual to community

Wisdom Networks could deliver a rapid jump in growth by redeploying Information Age organisers into productive crowds

Directors
(define outcomes)

Managers
(review and focus)

Information Age organisers become Managers or Executives

Information Age
(organise)

Executives
(execute tasks)

Hierarchy - more process, less outcomes

Hierarchies do not scale well. They can't get the best, or save us from the worst, of all individuals all the time.

The more people that are added to hierarchies ... the less efficient and effective they become. Larger results in more process and less outcomes.

The law of diminishing returns means we need to reshape the status quo.

Hierarchies duplicate many things and effort in organisations, local communities, industry, nations and across the world.

Wisdom Networks - one process, more outcomes

Wisdom networks organise ... so people don't have to.

Everyone focuses on "things", "books" and outcomes

One uniform six stage process covering multiple communities

No duplication - one "thing" used across all communities

One wisdom network can manage multiple communities of any size

Only wisdom networks provide a rapid jump in productivity, growth and wealth to sustain society ... other wealth creation tools are ineffective!

How can we create wealth to increase living standards and sustain society?

Declining or negative productivity means lower standards of living

Society has been reduced to a zero sum game and wealth transfers

Only wisdom networks provide a rapid jump in productivity and growth ... by restructuring human time and attention

Wisdom Networks return society to productivity, growth and wealth creation

Wealth creation

Macroeconomic reform

Restructuring human time and attention

Wisdom Networks

Microeconomic reform

Innovation

Investment in the Status quo

Currency depreciation

Taxation & Government expenditure

Debt

Subsidies and Bailouts

Spending more than you earn

Wealth transfers

Printing money & monetary policy

...

National Wisdom Network (NWN) guides people through "things", "books" and process to outcomes across communities

Multiple communities in one web application

- Individual
- Organisation
- Health
- Education
- Equity market, Innovation
- Governance
- Government
- Economic development
- National, Global

Example: "things" and "books" in the health community

Better outcomes

- accessibility
- transparency
- efficiency
- productivity
- meritocracy
- growth

How to achieve community wisdom

Data → Information → Community → Collaboration → Knowledge → Wisdom

We tag and link "The Internet of Things" (Information, Community, Collaboration and Wisdom) to reveal knowledge focus the "Wisdom of Crowds" on outcomes.

1. Make **data** available by URL, upload or create
2. Tag data to create **information**
3. Share information with your **community**
4. **Collaborate** toward outcomes
5. Link everything to reveal **knowledge** in a book
6. Focus **wisdom** and effort on outcomes

Wisdom Networks link communities across communities to provide a regional or global network

2014

Individual Wisdom Networks
(country, industry, organisation)

Integration
(regional, industry, national)

Global integration
(community, industry)
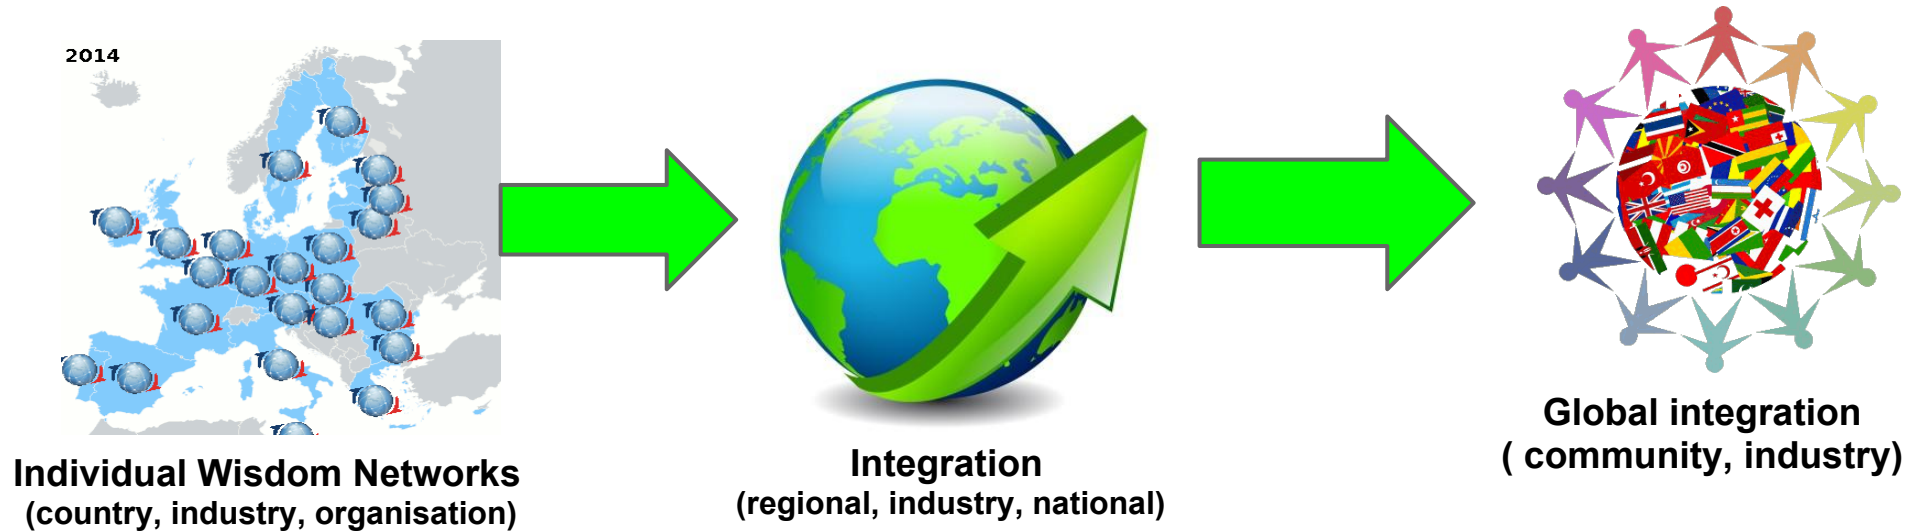

Many countries (and organisations) have declining and negative productivity

Wisdom Networks could jump start productivity, growth and prosperity.

A National Wisdom Network (NWN) could create a Network Society and be a platform to integrate with the global community

After a long wait, all the pieces have finally come together ... let's get started ... we can accelerate evolution

Community connected
The community needs to be connected ... society crowd created connectivity (ie the internet)

Information available by URL
The community crowd created information (ie the World Wide Web)

Connections need to be rich
All types of information needs to be exchanged between participants

Speed
Fast enough to allow real-time person to person communication

Software
Society has crowd created open source software

Content Management System
We need a highly sophisticated generic system to manage community content ... let's not reinvent the wheel

"Wisdom of Crowds"
Our system needs to focus the effort and wisdom of the community on outcomes... a Wisdom Management System (WMS) does that for us

Motivation: Crisis
Change only occurs when people are pushed from the old AND pulled toward the new. We have a many crisis including productivity, GDP growth caps and others that reveal failures of "Information Age" structures

Critical mass

Government
Government departments participate to encourage and regulate

Wisdom Networks can be launched to all communities at the same time ... or specific communities can be launched one at a time in the order of most benefit

Communities deriving most benefit from NWN

- Health (personal) - doctor, patient, nurse wisdom
- Fueling the growth of SME's to drive economic growth (company, adviser and investor wisdom)
- Governance (wisdom shareholder meetings)
- Health (research) - researcher, medicine, clinical trials
- Education - teacher, student, books, courses

Global Wisdom Networks

- Energy
- Resources
- Pharmaceuticals
- Automotive
- Government

Wisdom

Knowledge

Collaboration

Community

Information

Data

Energy, Food, Resources, Climate, Poverty

National Wisdom Network

Economic Development

Democracy

Equity Market

Education

Governance

Health community
(industry and research)

Personal health
(chronic and inactive)

Sequential (starting with greatest benefit)

Launch all networks at once
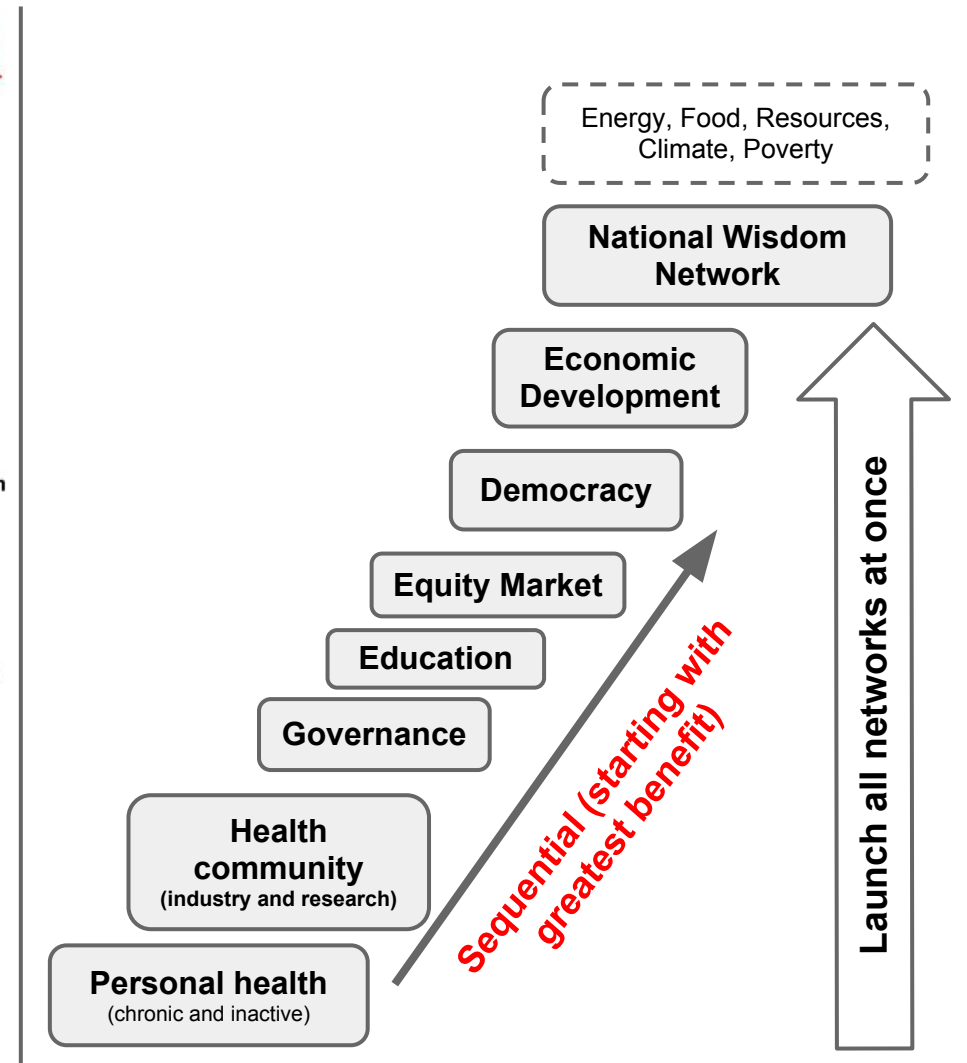

Wisdom Networks deliver 80%+ of the outcome at <10% of the cost in 6 months

- Pareto principle - 80% of the outcomes for <20% of the effort or cost
  - an 80% outcome deployed quickly within 6 months
  - The pursuit of the additional 20% dramatically increases cost and probability of failure
- Global coverage encompassing all countries
  - Each country is simply a "tag" identifying where the "Thing" is
- A Wisdom Network is assembled from open source technology (not built from scratch)
  - Large global communities can deliver real-time merit based innovation and services
  - Open source has <25% of the Total Cost of Ownership of Proprietary software
  - Assembling open source faster than coding proprietary and a richer pool of innovation
- "Things" are simply links of data or files direct from their source (or where they were produced)
  - By linking direct to source, some of the cost and delays of "Big Data" can be avoided. The Wisdom Network just indexes, and does not need to produce the "Thing". Other SaaS can produce or modify "Things".
  - Source include: A "personal data store" on a mobile phone, open data from enterprises and SME's
  - *Avoid some "Big data" costs:* *Big data will drive US$28 billion of worldwide IT spending in 2012, growing to US$34 billion in 2013, according to Gartner, Inc. Big Data to create 4.4 million IT jobs globally by 2015*
- Less hardware, software and communications technology
  - Wisdom Networks only require a handful of technologies
  - Web application: Linux Apache MySQL PHP
  - Cloud servers: Amazon
  - Devices: Tablets and phones (probably Android because of greater power and versatility)
  - Internet Browser:
  - Communications: Skype and Internet (or TCP/IP)
- 500 "Things" in one place mean less integration cost and complexity from integrating fragmented, incompatible information technology
  - Desktop and most SaaS applications manage a handful of "things" (mainly "information" and "1-2 "collaboration")

General Benefits

- Meritocracy
- Transparency
- Accessibility:
- Productivity
- Growth
- Accountability
- Wellbeing
- Utilisation increases
- global labour market
- Global capital market
- Global responsibility

Developing countries can go straight to Wisdom Networks

- Developing countries saved billions by installing mobile phone networks and bypassed expensive copper fixed lines.
- Developing countries can save billions again by deploying comprehensive Wisdom Networks, rather than conventional, enterprise information technology and hierarchical management structures

Wisdom Networks crowd create Network Society
